| ■ SCOPE OF APPLICATION OF THE LCA | → | <p>The LCA analysis was conducted according to the ISO 14025, ISO 14040, ISO 4044 and EN 15804 standards. Both specific data from the production process and data from the Ecoinvent 3.6 database were used.</p> <p>The methods defined in the EN 15804 2012+ A2 : 2019 standard were used as calculation and assessment methods for the impacts.</p> <p>The LCA study covers the:</p> <ul style="list-style-type: none">• production phases of raw materials and energy;• transport of materials;• production at company sites;• end of life of the material. <p>The declared unit is 1m² of artifact in various thicknesses.</p> |

TECHNIQUE, POWER, PASSION

Since 1960 Campolonghi has combined skill and tradition with the latest machinery, to become the point of reference on the international market of quality stone products.

PRODUCT DESCRIPTION AND CPC CODE

PRODUCT

Marble and ornamental stone slabs in various processes and thicknesses for architectural works and building constructions.

CPC CODE

151- MONUMENTAL AND BUILDING STONES

COMPARABILITY

EPD of building materials may not be comparable except in accordance with EN 15804 + A2: 2019 standard.

YEAR OF STUDY

The data used refer to the calendar year 2019.
Study carried out in the year 2021.

DECLARED UNIT

1 m² of granite and ornamental stone slabs in thicknesses from 2 to 5 cm for interior and exterior flooring and cladding.

GRANITE					
SHEET THICKNESS		20 mm	30 mm	40 mm	50 mm
Biogenic carbon in the product	kg/m ²	0	0	0	0

DECLARED UNIT

from 2 cm to 5 cm
1 m² of granite slabs
and ornamental stones
in thicknesses from 2 to 5 cm
for flooring and internal
and external coatings

COMPANY PROFILE

The craftsmanship is combined with refined technology, tradition and wisdom, expressions of a region that over the centuries has been synonymous with the culture of marble, transforming itself into a living structure that can compete and dominate the international market. This is the essence of Campolonghi Group, a worldwide leader of high quality stone products with buildings using their products erected all over the globe.

CAMPOLONGHI GROUP

Headquartered in Montignoso, Tuscany, Campolonghi also has three other locations in Italy and an office in England. We own two quarries, La Facciata and Sponda, both located in the Torano basin, from which we extract the precious white Carrara marble. Campolonghi is one of the most important suppliers of marble and natural stone operating on the European market. It is a partner of the world's leading design and architecture firms. It also has special relationships with the major suppliers of marble and natural stone on the market.

CAMPOLONGHI MONTIGNOSO

CAMPOLONGHI QUERCETA

CAMPOLONGHI CARRARA

CAMPOLONGHI/STEN

LET YOUR SENSES GUIDE YOU, CHOOSE THE BEAUTY

Precious materials suitable for any type of work or project, which make Campolonghi **one of the most important names among the world suppliers of quality stone products.**

Providing work carried out at the highest quality is the prerogative and pride of the Campolonghi Group.

Since the company was founded in 1960, Campolonghi has invested in the **enhancement of quarries, exclusive materials and new production technologies,** becoming today the **reference point in the international market for quality stone products.**

RESORT WORLD AT SENTOSA in SINGAPORE

UNDERSTAND FULLY YOUR TECHNICAL, AESTHETIC AND DESIGN REQUIREMENTS

The materials can be inspected, giving you the opportunity to touch them with your hand and to personally evaluate their quality.

We are able **to carry out every single project to perfection**, providing all the experience and professionalism of those who, for over fifty years, have been supplying only high quality marble and natural stones, occupying a prominent place on the international scene.

We guarantee you **design support, technical evaluations and commercial advice**, in order to establish profitable long-term relationships.

STUDY

System boundaries

This EPD is of the “cradle to gate with options” type and includes the mandatory modules A1 (Raw materials), A2 (Transport), A3 (Manufacturing) and the modules C1 (Deconstruction/Demolition), C2 (Transport to waste processing), C3 (Waste processing), C4 (Disposal) and D (Reuse/Recovery/Recycling potential) in compliance with the requirements of the EN 15804:2012 + A2:2019 standard.

UPSTREAM

A1/A2

QUARRY OPERATIONS AND RAW MATERIAL TRANSPORT

CORE

A3

In this phase
blocks are sawn,
by diamond wire,
in slabs of different
thickness.

SAWING OF BLOCKS

Slabs are shaped
and finished to the
size requested by
the final customer.

CUT TO SIZE

SURFACE PROCESS

Slabs are finished
superficially through
process of sanding,
polishing, flaming,
water jet, etc.

PACKAGING

Finished product,
in various sizes
and thicknesses, is
packed, ready to
be shipped to the
final customer.

DOWNSTREAM

C1/C2/C3/C4/D

END OF LIFE

When a granite slab
reaches its end of
life it can undergo
reuse, recycling or
disposal.

System boundaries

Table 1- Modules included in the LCA

	Product stage			Construction process stage		Use stage							End-of-life stage				Resource recovery stage

X = included in the analysis INA = Indicator Not Assessed

End of Life Scenario (C1-C2-C3-C4)

When a granite product reaches its end of life it can undergo reuse, recycling or disposal.

Two scenarios are assumed:

SCENARIO 1 - 100% Recovery (C1+C2+C3+D)

SCENARIO 2 - 100% Disposal (C1+C2+C4+D)

The RSL (Reference Service Life), given the nature of the product and its intended use, is estimated to be equal to the lifetime of the installation building, equal to 50 years.

Cut-off

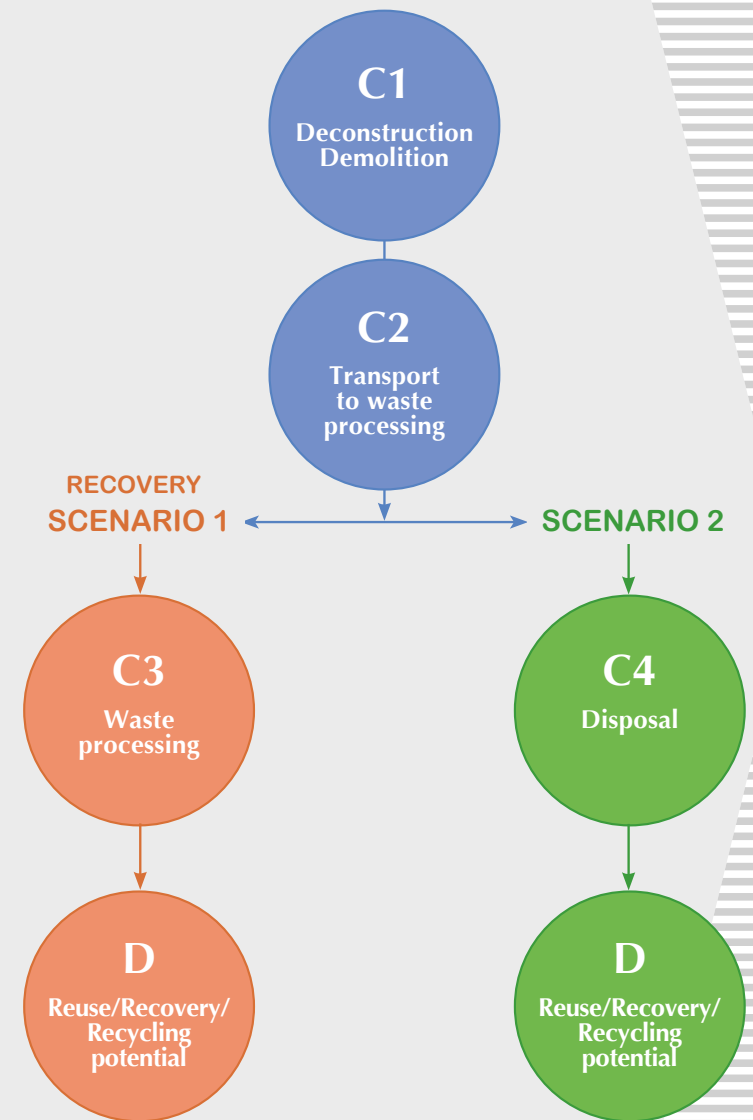

The environmental impacts related to personnel, infrastructures, production of materials not directly consumed in the production process were not included in the study. All process inputs and outputs for which data is available have been included in the calculation. Less than 1% of the total inputs/outputs of the system were subject to cut off.

Allocation rules

The allocation rules used, in accordance with the provisions of EN 15804 standard, are specific for each material, and the criterion used is the one identified as the most relevant to the type of processing performed.

Allocation criteria used were:

- **allocation by processed surface** (sawing processes, surface treatment, cutting);
- **allocation by mass** (transport, internal handling, packaging).

ENVIRONMENTAL PERFORMANCE

Production (A1-A3) Environmental impact of 1m² of Campolonghi granite slab - 2 to 5cm thick.

ADDITIONAL INDICATORS

Impact category	Reference Unit	C1	C2	C3	C4		D
GWP-GHG	kg CO2 eq	3.75E-02	1.24E-01	0.00E+00	1.73E-01		0.00E+00

Acronyms

Environmental impacts:

ADP = Abiotic Depletion Potential (elements)

AP = Acidification Potential

EP* = Eutrophication Potential

[*The eutrophication potential (EP) is expressed in kg of P eq. To find the corresponding value in PO₄ eq multiply by the conversion factor 3.07]

GWP = Global Warming Potential

ODP = Ozone Depletion Potential

POCP = Photochemical Ozone Creation Potential

WDP = Water Deprivation Potential

Resource consumption:

PERT = Total use of renewable primary energy resources

PERM = Use of renewable primary energy resources used as raw materials

PERE = Use of renewable primary energy excluding renewable primary energy resources used as raw materials

PENRT = Total use of non-renewable primary energy resources

PENRM = Use of non-renewable primary energy resources used as raw materials

PENRE = Use of non-renewable primary energy excluding non-renewable primary energy resources used as raw materials

SM = Use of secondary material

RSF = Use of renewable secondary fuels

NRSF = Use of non-renewable secondary fuels

FWT = Total use of net fresh water

Waste production:

HWD = Hazardous waste disposed

NHWD = Non-hazardous waste disposed

RWD = Radioactive waste disposed

CRU = Components for reuse

MFR = Materials for recycling

MER = Materials for energy recovery

EE = Exported energy

VERIFICATION AND REGISTRATION

EPD of construction products may not be comparable if they do not comply with EN 15804:2012+A2:2019.
Environmental Product Declaration within the same product category from different programs may not be comparable.

CEN standard EN15804 served as the core PCR

■ PCR	→	INTERNATIONAL EPD® System - PCR 2019:14 CONSTRUCTION PRODUCTS Version 1.11
■ PCR review was conducted by	→	The Technical Committee of the International EPD® System. See www.environdec.com/TC for a list of members. Review chair: Claudia A. Peña, University of Concepción, Chile
■ Independent verification of the declaration and data, according to ISO 14025:2006	→	EPD Process Certification (Internal) EPD Verification (external)
■ Third party verifier	→	DNV GL BUSINESS ASSURANCE ITALIA S.r.l.
■ Accredited or approved by	→	Accredia

EPD is a voluntary certification scheme; a document that provides detailed information - objective and comparable - on the environmental impact of products or services, considering important variables such as: energy consumption and raw materials, atmospheric emissions, waste production and discharges into water. EPD, included among the community environmental policies, allows to obtain a voluntary international certification, useful for certifying the environmental performance of the goods being analyzed.
